

For measuring CO₂, with integrated temperature and humidity sensor. Dual channel CO₂ technology. With Modbus RTU communication and integrated 0...10 V outputs. NEMA 4X / IP65 rated enclosure.

Type Overview

Type	Communication	Output signal active CO ₂	Output signal active temperature
22DTM-15	Modbus RTU	0...5 V, 0...10 V	0...5 V, 0...10 V

Technical data

Electrical Data	Nominal voltage	AC/DC 24 V
	Nominal voltage range	AC 19...29 V / DC 15...35 V
	Power consumption AC	4.3 VA
	Power consumption DC	2.3 W
	Electrical connection	Pluggable spring loaded terminal block max. 2.5 mm ²
	Cable entry	Cable gland with strain relief 2 x Ø6 mm
Data bus communication	Communication	Modbus RTU
	Number of nodes	Modbus see interface description
Functional Data	Sensor Technology	CO ₂ : NDIR (non dispersive infrared) dual channel Relative humidity: with stainless steel wire mesh filter
	Application	air
	Voltage output	2 x 0...5 V, 0...10 V, min. resistance 10 kΩ
	Output signal active note	output 0...5/10 V with jumper adjustable
Measuring Data	Measured values	CO ₂ relative humidity Absolute humidity Dew point Enthalpies Temperature
	Measuring range CO ₂	adjustable via Modbus default setting: 0...2000 ppm
	Measuring range humidity	adjustable via Modbus Default setting: 0...100% RH
	Measuring range temperature	Adjustable via Modbus Default setting: -32...122°F [0...50°C] Attention: max. measuring temperature is restricted by max. fluid temperature (see Safety data)
	Measuring range absolute humidity	adjustable via Modbus default setting: 0...50 g/m ³
	Measuring range enthalpy	adjustable via Modbus default setting: 0...85 kJ/kg

Measuring Data	Measuring range dew point	adjustable via Modbus default setting: -30...120°F [0...50°C]
	Accuracy CO ₂	±(50 ppm + 3% of measured value)
	Accuracy humidity	±2% between 0...80% RH @ 77°F [25°C]
	Accuracy temperature active	±0.3°C @ 25°C [±0.54°F @ 77°F]
	Long-term stability	±50 ppm p.a. ±0.3% RH p.a. @ 70°F [21°C] @ 50% RH ±0.09°F p.a. @ 70°F [±0.05°C p.a. @ 21°C]
Materials	Time constant τ (63%) in air duct	CO ₂ : typical 33 s @ 1 m/s Relative humidity: typical 10 s @ 3 m/s Temperature: typical 125 s @ 3 m/s
	Cable gland	PA6, black
	Housing	Cover: PC, orange Bottom: PC, orange Seal: NBR70, black UV resistant
	Probe material	PA6, black
Safety Data	Protection class IEC/EN	III, Safety Extra-Low Voltage (SELV)
	Power source UL	Class 2 Supply
	Degree of protection IEC/EN	IP65
	Degree of protection NEMA/UL	NEMA 4X
	Enclosure	UL Enclosure Type 4X
	EU Conformity	CE Marking
	Certification IEC/EN	IEC/EN 60730-1
	Quality Standard	ISO 9001
	UL Approval	cULus acc. to UL60730-1A/-2-9/-2-13, CAN/CSA E60730-1/-2-9
	Type of action	Type 1
	Rated impulse voltage supply	0.8 kV
	Installation method	Independently mounted control
	Pollution degree	3
	Ambient humidity	Max. 95% RH, non-condensing
	Ambient temperature	0...50°C [32...122°F]
	Fluid humidity	Max. 95% RH, non-condensing
	Fluid temperature	0...50°C [32...122°F]
	Operating condition airflow	min. 1 ft/s [0.3 m/s] max. 40 ft/s [12 m/s]

Safety Notes

This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application. Unauthorized modifications are prohibited. The product must not be used in relation with any equipment that in case of a failure may threaten humans, animals or assets.

Ensure all power is disconnected before installing. Do not connect to live/operating equipment. Only authorized specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.

The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Remarks

General Remarks Concerning Sensors

Sensing devices with a transducer should always be operated in the middle of the measuring range to avoid deviations at the measuring end points. The ambient temperature of transducer electronics should be kept constant. The transducers must be operated at a constant supply voltage (± 0.2 V). When switching the supply voltage on/off, onsite power surges must be avoided.

Build-up of self-heating by electrical dissipative power

Temperature sensors with electronic components always have a dissipative power which affects the temperature measurement of the ambient air. The dissipation in active temperature sensors shows a linear increase with rising operating voltage. The dissipative power should be taken into account when measuring temperature.

In case of a fixed operating voltage (± 0.2 V), this is normally done by adding or reducing a constant offset value. As Belimo transducers work with a variable operating voltage, for reasons of production engineering only one operating voltage can be taken into consideration. Transducers 0...10 V / 4...20 mA have a standard setting at an operating voltage of DC 24 V. This means that at this voltage, the expected measuring error of the output signal will be the least. For other operating voltages, the offset error will be increased by a changing power loss of the sensor electronics.

If a readjustment directly at the active sensor should be necessary during later operation, this can be done with the following adjustment methods.

- For sensors with NFC or dongle with the corresponding Belimo app
- For sensors with a trimming potentiometer on the sensor board
- For bus sensors via bus interface with a corresponding software variable

Application notice for humidity sensors

Refrain from touching the sensitive humidity sensor element. Touching the sensitive surface will void warranty.

When exposed to harsh environmental conditions such as high ambient temperature and/or high levels of humidity, or presence of aggressive gases (i.e. chlorine, ozone, ammonia), the sensor element may be affected and readings may be outside the specified accuracy. Replacement of deteriorated humidity sensors due to harsh environmental conditions is not covered by the general warranty.

The sensor shows best performance when operated within the recommended normal temperature range of 0...50°C [32...122°F] and a humidity range of 20...80% RH. Long-term exposure to conditions outside the normal range, especially at high humidity, may temporarily offset the humidity signal (e.g. 3% RH after 60 h kept at >80% RH). After returning into the normal temperature and humidity ranges, the sensor will slowly come back to calibration state by itself.

Information self-calibration feature CO₂

All CO₂ sensors are subject to drift caused by the aging process of the components, resulting in regular re-calibration or replacement of units. However, the dual channel technology integrates automatic self-calibration technology vs. common used ABC-Logic sensors. Dual channel self-calibration technology is ideally suited for applications operating 24/7 hours such as those in hospitals or other commercial applications. Manual calibration is not required.

Scope of delivery

Scope of delivery

Description

Type

Mounting flange for duct sensor 19.5 mm, up to max. 120°C [248°F], Plastic

A-22D-A35

Cable Gland with strain relief Ø6...8 mm

Accessories

Optional accessories

Description

Type

Replacement filter sensor probe tip, wire mesh, Stainless steel

A-22D-A06

Connection adapter flex conduit, M20x1.5, for cable gland 1 x 6 mm, Multipack 10 pcs.

A-22G-A01.1

Connection adapter flex conduit, M20, for cable gland 2 x 6 mm, Multipack 10 pcs.

A-22G-A02.1

Mounting plate L housing

A-22D-A10

Tools	Description	Type
	Belimo Duct Sensor Assistant App	Belimo Duct Sensor Assistant App
	Bluetooth dongle for Belimo Duct Sensor Assistant App	A-22G-A05
	* Bluetooth dongle A-22G-A05	
	Certified and available in North America, European Union, EFTA States and UK.	

Service

Tools connection This sensor can be operated and parametrized using the Belimo Assistant App. When using the Belimo Duct Sensor Assistant App, the Bluetooth dongle is required to enable communication between the app and the Belimo sensor. For the standard operation and parametrization of the sensor the Bluetooth dongle and the Belimo Duct Sensor Assistant App are not needed. The sensor will arrive pre-configured with the factory default settings shown above.

Requirement:

- Bluetooth dongle (Belimo Part No: A-22G-A05)
- Bluetooth-capable smartphone
- Belimo Duct Sensor Assistant App (Google Play & Apple App Store)

Procedure:

- Plug the Bluetooth dongle into the sensor via the Micro-USB connector or by means of the interface PCB
- Connect Bluetooth-capable smartphone with Bluetooth dongle
- Select parametrization in the Belimo Assistant App

Wiring Diagram

Notes Supply from isolating transformer.

The wiring of Modbus RTU (RS-485) is to be carried out in accordance with applicable regulations (www.modbus.org). The device has switchable resistors for bus termination.

Modbus-GND: Supply and communication are not galvanically isolated. Connect earth signal of the devices with one another.

Detailed documentation

The separate document Sensor Modbus-Register informs about Modbus register, addressing, parity and bus termination (DIP1: address, DIP2: baud rate, parity, bus termination)

Wiring RS485 Modbus RTU
